1. Purpose

- 1.1 In order to avoid errors and deviations by different testing method or condition, we established this specification to define the battery model and test method of lithium battery manufactured by Lixing.
- 1.2 Give some guidance for using our products.

2. Description and Model

Table 1

lable 1	
Description	Model
Lithium manganese dioxide cylindrical battery	2CR5

3. Technical parameters

Table 2

	1	able 2				
No.	Items	Characteristics				
1	Nominal Capacity*	1500 mAh				
2	Discharge capacity (continuously discharge under 10mA, till 4.0V end voltage) 1400±100 mAh					
3	Nominal Voltage	6V				
4	Operating Temperature range	-20∼+60°C				
5	Max. Pulse Current	3500 mA				
6	Max. Continuous Discharge Current	1500 mA				
7	Structures	Manganese dioxide cathode, lithium anode organic electrolyte, polypropylene separator and stainless steel cell can and cap, etc.				
8	Weight for Reference	About 38g				

^{*} Nominal Capacity: The nominal capacity means that when discharged at $10mA \sim 20\pm2\,^{\circ}C$ end voltage 4.0V. (the nominal capacity may differ due to change of the discharge current, temperature and end voltage)

The cell or battery is crushed between two plates through the vise 32mm diameter hydraulic piston arm with the pressure of about 13KN. Each battery should be forced discharged at ambient temperature 20°C±5°C by connecting it in series with a 12 V D.C. power supp at an initial current equal to the maximum discharge currer specified by the manufacturer. Each battery should be forced discharged for a time equal to the time in which a new cell discharged to 2.0 V. Sample batteries are to be connected reversely with a D.C. power supply, and subjected to a constant charging current at 3 times the Leach control onto a concrete surface. Each sample is to be dropped from a height of 1π onto a concrete surface. Each sample is to be dropped six times, two times in each direction. The sample should be examined 1 hour after testing The battery should be placed in an oven. The oven temperature should be increased at a rate of 5°C±2°C per minute until the over reached 130°C±2°C. The oven should be maintained at 130°C±2°C for 10min. The cell or battery to be tested is discharged of 50% DOD, 75% DOD, and then connect it with fresh cells at qty of n-1 pieces and resistance R, of which n and R is specified by manufacturer. Connect a test battery with three fresh cells of same model in series, than or equal to 0.1 Ω. Test should be under(20 ± 5) °C for 10min.

7. Test condition

7.1 State of batteries:

The batteries should be marked with manufacture date(year, month, date)

7.2 Normal testing environment:

If no special requirement, test should be made under the temperature of (20 \pm 5) °C and relative humidity of 45%-75%.

7.3 Test precision:

The measuring tolerances relative to the specified or actual values should be within these range:

Voltage	Current	Capacity	Temperature	Time	Weight	Dimension
±1%	±1%	±1%	±3℃	±0.1%	±0.1%	±0.1%

These tolerances include all errors caused by precision of testing instrument, testing method and testing process.

8. Packaging

Dimension of box	Net weight	Gross weight
406mm×287mm×165mm	10.5KG	14KG

Normal package: 300 pcs per box.

9. Environment requirement

The product meets ROHS standard.

10. Producing standard and certification

Our batteries are produced according to the IEC-60086 standard, UL2054 safety authentication (MH45423) and UN38.3 shipment authentication. \circ

11. Transportation

- The Batteries should be stored away from solarization, fire, rain, water, and never put together with corrosive during transportation.
- Vibration and shock during transportation and load-and-unload should be Page 8 Total 12

restrict to a minimum level.

- The height should not exceed 1.5m for cardboard packages.
- The batteries if transported by sea should be stored away from ship engines during

prolonged transit, and not left for long periods in unventilated environment during summer.

12. Information for safety

! Dangerous

- —Do not overheat batteries or dispose of batteries in fire.
- -Do not put batteries together with metalwork such as necklace, coins, etc in one bag, or store them together
- Do not short-circuit batteries.
- -Do not inset batteries in reverse. Observe the + and markings on battery and equipment.
- -Do not disassemble batteries.
- -Do not weld or solder directly to batteries.
- -Do not use deformed batteries or batteries with serious scar.
- -Read the guide carefully before using batteries. Unsuitable operation will make batteries overheat, fire, explode, destroy or reduce battery's capacity.

! Warning

- —Do not place the battery in heater, washer or high-pressure container.
- -Do not use the battery together with different kind of or different type of battery.
- Stop using when the battery become heat, emit smell or appear other abnormality during use, or storing.
- Do not recharge the battery.
- —Do not force-discharge the battery.
- -Keep away from the battery when the battery is leakage or emit abnormal smell.
- Wash yourself quickly when the electrolyte infiltrate to your skin or clothes.
- Wash your eyes with clean water quickly and go to hospital for further

check if the electrolyte infiltrate to your eyes.

— Please contact with us in advance If two or more batteries are to be connected in a series and / or placed in a parallel arrangement.

! Caution

- -Keep the battery away from the children, avoid being swallowed.
- Read the guide carefully and pay attention to the guide when using the battery.
- Read the instrument guide carefully before installing the battery or uninstalling

the battery from the instrument.

- Take out of the battery when the life of the battery is over.
- Take out of the battery and keep it under the condition of low temperature and low humidity when the battery is not used for a long time.
- Clean the battery with dry cloth before use if the connection of the battery is dirty.
- -Battery should be used and stored far from the electrostatic place.

13. Storage

- The batteries should not be stored next to heat sources nor in direct sunlight. The storage area should be clean, cool, dry, ventilated and weatherproof.
- The height to which batteries may be stacked is clearly dependent on the strength of the packaging. As a general rule, this height should not exceed 1.5m for cardboard packages nor 3m for wooden cases.
- Store and display batteries in their original package. The batteries may be short-circuited or damaged if been unpacked and stacked mussily.

14. Declaration

- Please contact with Wuhan Lixing (Torch) Power Source Co., Ltd. If you have any question with this specification.
- Wuhan Lixing (Torch) Power Source Co., Ltd keep the right to change the specification.
